transactinide elements; and theoretical methods for the prediction of heavy element electronic properties, molecular structure, and reactivity. The actinide elements form a unique chemical series in the periodic table due to the filling of the 5f electron subshell.

### **Research Activity: Heavy Element Chemistry**

Chemistry of the Heaviest Elements The nuclear and chemical properties of the heaviest elements are explored at LBNL. Investigations of transactinide element ( $Z > 103$ ) chemistry are being conducted, and new techniques are being developed to facilitate these studies.

A. Introduction to Chemistry, Atoms and Elements Importance of Chemistry Question: If cataclysmic event were to destroy all knowledge of science what would be the most important knowledge to pass on to future generations? Answer: Everything is made of Atoms. Atomic Theory is the central theme of chemistry and most important idea in science.

#### **A. Introduction to Chemistry, Atoms and Elements**

Most heavy metals have a high atomic number, atomic weight and a specific gravity greater than 5.0 Heavy metals include some metalloids, transition metals, basic metals, lanthanides, and actinides. Although some metals meet certain criteria and not others, most would agree the elements mercury, bismuth, and lead are toxic metals with sufficiently high density.

#### **Heavy Metal Definition and List - ThoughtCo**

A heavy metal is any of a number of higher atomic weight elements, which has the properties of a metallic substance at room temperature. Living organisms require trace amounts of some heavy metals ...

Additional resources for Theoretical Chemistry and Physics of Heavy and Superheavy Elements Sample text First, the development of a systematic sequence of basis sets capable of approaching a complete set as the number of functions is increased.

#### **Theoretical Chemistry and Physics of Heavy and Superheavy**

An early use of the term "heavy metal" dates from 1817, when the German chemist Leopold Gmelin divided the elements into nonmetals, light metals, and heavy metals. Light metals had densities of  $0.860 \leq \rho < 5.0$  g/cm<sup>3</sup>; heavy metals  $5.308 \leq \rho < 22.000$ .
