throughout postglacial time or  $\hat{\sim} 2\%$  of the total number of eruptions. However, collectively these events produced about 55% of the postglacial magma volume. The Eastern Volcanic Zone is responsible for >80% of the eruptions and  $\hat{\sim} 60\%$  of the erupted magma volume and has been by far the most prolific producer among the neovolcanic zones.

Postglacial vegetation refers to plants that colonize the newly exposed substrate after a glacial retreat. The term "postglacial" typically refers to processes and events that occur after the departure of glacial ice or

glacial climates .
